

Name	Tembakau Srinthil Temanggung	Date of registration	13-05-2014	
Country	Indonesia			

Source: DGIP

Main characteristics/features

Physically Temanggung Srinthil Tobacco (Tembakau Srinthil Temanggung) is a blackish-brown to black agglomerate of tobacco. It has a distinctive fresh and fragrant aroma. Its nicotine levels range between 5.05 % and 7.58%.

Geographical area

Temanggung Srinthil Tobacco grows on the slopes of mount Sumbing and Sindoro, at an altitude of more than 800 m above sea level. Most plantations are in Tililir (Tlogomulyo district), Pagergunung (Bulu district) and Kemloko (Tembarak district), in the Temanggung regency, Central Java province.

Process of production/processing

The seeds used, kemloko 1, 2 and 3, are local varieties. Harvesting takes place between May and October, when the weather is relatively dry with little rain. Tobacco plants are planted at an altitude of more than 800 m. Picking is done between 9.00 and 11.00 or between 16.00 and 18.00. If, after leaving the tobacco to cure for five days, a yellow fungus (yellow Puthur) appears, the leaves will be used to make Srinthil tobacco. Other signs are the softening of leaf tissue, a fragrant aroma or cracked leaf veins. If these signs appear, then the leaves will be left to ripen for seven more days, then chopped, dried, rolled and packaged. If after five days, there is no yellow Puthur, then the leaves are processed into Temanggung sliced tobacco not Srinthil tobacco.

Link between the product and the territory

Temanggung Srinthil Tobacco only grows in the Bulu, Tembarak and Tlogomulyo districts at altitudes of more than 800 m above sea level on the slopes of mount Sumbing and mount Sindoro. This area has an average rainfall of 20.7 to 27.7 mm per day. The topography varies from wavy and hilly, to steep and extremely steep. This area has a lot of volcanic activity with young soils of moderate to high fertility, of the inceptisol order. The soil can be sandy, sandy loam, clay loam, dusty loam, and loam with the pH ranging from 4.5 to 6.5. In the local communities, the skill to grow tobacco is passed on from generation to generation.
