Main characteristics/features

Gayo Aceh tangerine (Jeruk Keprok Gayo Aceh) is planted as an intercrop with coffee plants to give the coffee a characteristic sharp taste and aroma of oranges. This tangerine has a flat round shape, a yellowish-green to yellow-orange colour and a sweet and slightly sour taste. Analysis and taste tests of fully ripened tangerines show sugar content of 10.44-10.78 °Bx and a sweetness score of 4.0 (very sweet).

Geographical area

Gayo Aceh tangerines are produced in the central Gayo Mountain region in the Gayo Highlands, located in the central part of the Bukit Barisan mountain range in the province of Aceh. They are grown at an altitude of 900-1 300 masl.

Production/processing

Gayo Aceh tangerines are planted using nursery saplings and cared for until they are ready for harvest. The fruit is harvested when it takes on an orange-yellow colour, indicating it has reached the optimum point of ripeness according to pre-established quality standards. Gayo Aceh tangerines are hand-picked from the tree using a ladder. Picking is carried out in stages as the fruits ripen. Harvesting usually takes place during the day, starting after the morning dew has dried and carrying on into the afternoon. The harvested fruits are then cleaned, graded and sorted before being labelled and packaged.

Link between product and territory

Agro-climate characteristics of the planting area at an altitude of 900-1300 masl, in highly fertile andosol, latosol and podzolik soil types. Temperatures range from 18 - 32 °C and humidity levels of 30-75.8 % are suitable for Gayo Aceh Tangerine.

Gayo Aceh tangerines are part of the tradition of the people of the region, who offer them as gifts and as a sign of friendship, and take pride in cultivating them for their sharp citrus fruit aroma and sweet and slightly sour taste.
