Main characteristics/features

Lampung Black pepper (Lada Hitam Lampung) is black to brown in colour with a 13 % maximum water content, 3.29-4.7 % piperine levels, 1.14-2.89 % essential oils and 12.8-15.20 % oleoresin. It has a spicy aromatic taste due to its piperine content. This pepper has a profile of flavors such as, free from contamination and has a spicy aromatic taste.

Geographical area

Lampung Black pepper is grown in an area which covers 61 982 ha, in East Lampung, North Lampung, Tanggamus and West Lampung. The planting altitude in Lampung province is 200-800 masl. North Lampung is the largest producer of black pepper.

Production/processing

Farmers propagate the pepper plants using stems taken from climbing tendrils, hanging tendrils, ground tendrils and fruit tendrils (fruit branches). The pepper trees are grown in rows with live tulle and using organic or non-organic fertiliser. The pepper berries are ready to be harvested if on one bunch of berries there is red (2 %), yellow (23 %) and dark green peppers (75 %). The pepper berries are harvested by hand together with the stalk. Picking of the mature pepper is done carefully in one go, or gradually as the berries mature so that the pepper is not damaged. The berries go through sorting, threshing and drying in the sun until they reach 15 % moisture content and are then packed in plastic sacks ready for market.

Link between product and territory

Lampung Black pepper grows quite well on podzolic and latosol soil types with an average temperature of 23-32°C, and rainfall of 2000-2500 mm/yr with a dry season of less than 2 months. Lampung Black Pepper has a high quality and reputation, thanks to farmers' strong commitment to quality.
