

Name | Buah Limau Bali Sungai Gedung
Country | Malaysia

Registration date:

13/11/2008

Expiry date:

13/11/2018

Source: myipo.gov.my

Main characteristics/features

Limau Bali or pomelo is a large lime that has received recognition from the Department of Agriculture, in Malaysia.

The weight of each lime is between 1.5 kg to 2.5 kg, and they have a sweet taste.

Geographical area

Limau Bali is produced in Sungai Gedung, which is near the Sungai Kurau stream in Perak, Malaysia.

Production and processing

The limes grow in Sungai Gedung, near the Sungai Kurau river. This is a suitable area for cultivation as the soil is fertile. The water from Sungai Kurau is used to water the lime trees during the hot season. Since the water is from a natural source, the limes produced are very high quality, and very sweet.

Besides the natural source of water, organic and other natural fertilisers are also used.

Link between product and territory

Sungai Gedung is located about 10 km east of Bagan Serai. A bridge was built across Sungai Kurau to facilitate transportation to the area. Since Sungai Kurau has two high tides each day, the soil along the river is fertile and therefore good for planting.

The geographical area constitutes the main link between the product and its territory.
