Main characteristics/features

The harumanis mango is the best type of mango in Malaysia. It is called harumanis [harum = aromatic, manis = sweet] mango because of its aroma and sweet taste.

Geographical area

The geographical area is located in Perlis.

Production and processing

The Department of Agriculture takes special interest in the cultivation practices of this tree to ensure that the quality of the mango is maintained. A mango tree can produce between 200 and 300 mangoes per year. The fruit that is picked is processed on the same day. Using a grading machine, the fruit is graded according to its weight. It is then washed and treated with hot water to ensure that the fruit is free of fungus. Once the fruit is dry, it is stored for 72 hours. Subsequently, it is graded again, packed and sent for distribution. The harvest season for the harumanis mango is short, only between four and six weeks per year.

Link between product and territory

The harumanis mango grows so well in Perlis thanks to the climate and suitable terrain for this type of fruit. Moreover, it is the geographical area that makes the harumanis mango so distinctive. As the season of this mango is very limited, it is considered unique by consumers and its uniqueness is also linked to the geographical area.
