

Name Malaysian Durian Musang King
Country Malaysia

Registration date:

13/03/2014

Expiry date:

13/03/2024

Source: myipo.gov.my

Main characteristics/features

The Malaysian musang king durian is one of 199 varieties of durian in Malaysia. It is different from other durians as the flesh has a tumeric-yellow colour and the shell of the musang king durian has a dusky green tan or yellow colour.

Geographical area

The geographical area of production is located in all Malaysia.

Production and processing

Musang king durian trees can only grow in hot weather. Young durian trees are very susceptible to drought but high mortality can be avoided with proper irrigation. However, during the development of the fruit, the tree must receive adequate water for proper development. Too much water will cause the tree to bear new leaves at the expense of the fruits.

Link between product and territory

Since Malaysia experiences hot weather all year long, durian trees can grow well in this area.

The geographical area of Malaysia is suitable for the growth of durians.
