Main characteristics/features

Geographical area

Bà Rịa Vũng Tàu golden pulp longan has canoe shape, the shoulder emerges higher than the stalk. The fruit's skin colour is gold, similar to cow leather, and the skin has a smooth texture. Bà Rịa Vũng Tàu golden pulp longan has a pleasant fragrance, sweet taste with no sourness and acidity. Vitamin C content of Bà Rịa Vũng Tàu golden pulp longan is especially higher than golden pulp longan's cultivated in Bến Tre, Tiền Giang in Vĩnh Long, at 523,40mg/kg to 559,80mg/kg.

Communes of Tóc Tiên and Châu Pha of Tân Thành districts; Communes of Phước Long Thọ, Phước Hội, Long Mỹ and Lộc An of Đất Đỏ district; Communes of Phước Thuận, Hòa Hiệp and Bình Châu of Xuyên Mộc district; Wards 11 and 12 of Vũng Tàu city, Bà Rịa - Vũng Tàu province.

Production and processing

Link between product and territory

Variety: Indigenous longan variety, codename VT20XCV.
Planting season: June to August, at the distance of 5 x 6 meter.
Harvest: During August and September, 85 – 90 days after fructification. The fruit is ripe, ready for harvest when it turns yellowish brown, the stem has sunk, creating canoe-shape fruit.

The temperature in the geographical area is highly suitable for the development of longan tree. Low humidity during the development of the fruit and harvest helps mitigating bad fruit disease and creating the peculiar crunchy and dry pulp comparing to other areas' longan fruit.
