### Main characteristics/features

Cao Lãn is famous for its “cát chu” mango and “cát” mango. Cao Lãn “cát chu” mango has a short, round body with convex bottom. Cao Lãn “cát chu” mango has thick, firm and smooth pulp, with a chewy texture and small amount of fibre. Its taste is slightly sweet with a little sourness and a distinctive aroma. Cao Lãn “cát” mango has a longer shape. It has a round body, visible waist, sharp top and round bottom. The fruit has thin skin and bright yellow when ripe. The fruit has little juice and fibre, sweet taste and distinctive aroma.

### Geographical area

Communes of Hòa An, Tân Thuận Đông, Tịnh Thới, Tân Thuận Tây, Mỹ Trà, Mỹ Tân, Mỹ Ngãi, and wards 6 and 11 of Cao Lãn city, Đồng Tháp province;

Communes of Mỹ Xương, Mỹ Hội, Bình Hàng Trung, Bình Hàng Tây, Mỹ Long, Mỹ Hiệp, Bình Thạnh, An Bình, Mỹ Thọ, and Mỹ Thọ township of Cao Lãn district, Đồng Tháp province.

### Production/processing

“Cát chu” and “cát” mango trees are asexually reproduced as they will bear fruit faster (2 – 2.5 years) while maintaining good traits of mother trees. Cao Lãn farmers can also produce mango throughout the year by off-season blooming procedure. “Cát chu” mangos are harvested 85 - 90 days after fructification, while for “cát” mangos, it is 90 - 95 days. Harvested mangos will be preliminary sorted at the plantations, cleaned, and sorted again at the vendor. Then they will have their pathogens removed, packed, transported and stored.

### Link between product and territory

The area producing Cao Lãn mango resides inside a monsoon tropical climate region with relatively flat terrain, which are highly suitable for the development of mango, and are favourable conditions for off-season blooming. Cao Lãn also has a complicated system of rivers and canals, with many large ponds and lakes. This helps the irrigation for the mango plantations. Moreover, the Tiền river, one of the most important river of the Delta River, creates an area with a favourable microclimate and pedology for the mango. Mango in Cao Lãn is planted mainly on soil that has high total potassium content.
