Production/processing

Link between product and territory

The traditional knowhows of the local producers such as cloning, plantation designing including digging ditches, making planting columns, building dykes, storing water in wells contribute to the unique quality of Cái Mơn durian.

The soil has good drainage, the amounts of organic matters, total protein, exchange calcium and potassium are high. The abundant water supply from major rivers helps the flesh of Cái Mơn durian from having clots when ripe. The water has rich nutritional content, no salinity, slightly basic pH level, and high potassium, calcium and magnesium content resulting in the special taste of the product.
